

Connecting to WIFI on a Chromebook

When you turn on your Chromebook for the first time to access the school wifi, you should see this message:

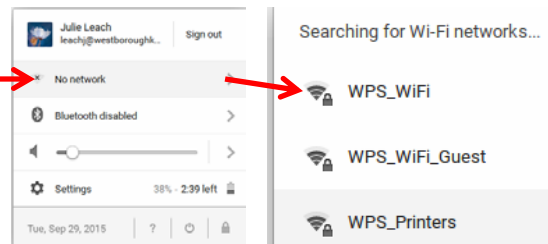

If you don't get this message you will need to disconnect from your home network. Click here to do that. Click on the network you are connected to and Disconnect.

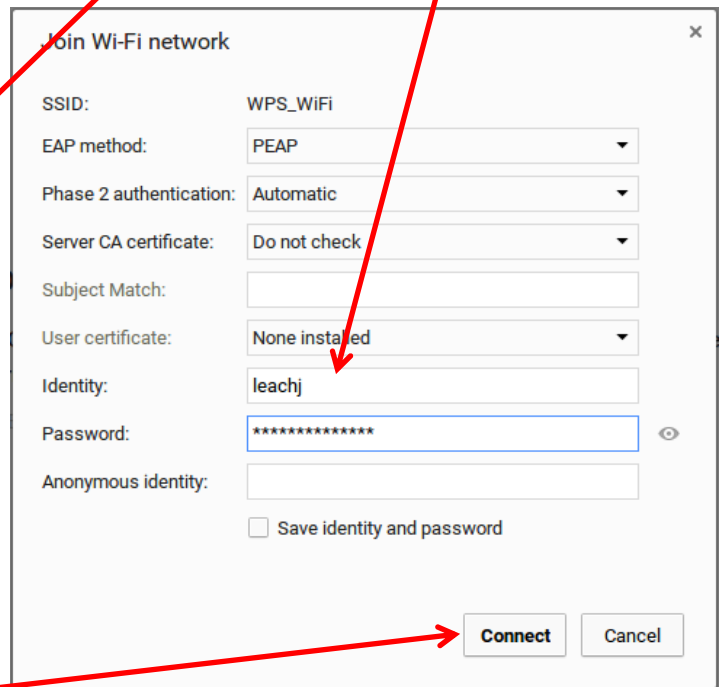

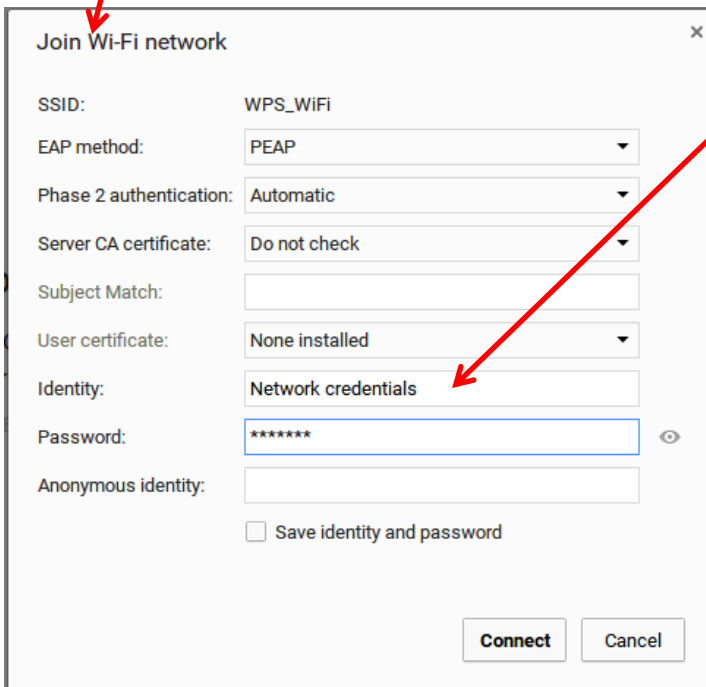

You should now be able to choose WPS_WiFi from the list.

You will come to a window where you will see "Join Wi-Fi network". Your settings should be set up as follows: The Identity box is where you would login with your network credentials. On the right window is how my network credentials would be.

You should only have to do this last window the first time you connect to the school Wifi. Click Connect when finished. You are now connected to WPS_WiFi.
